PLAIN (PL)
Plain finish designation means that the channel retains the oiled surface applied to the raw steel during the rolling process. The fittings have the original oiled surface of the bar-stock material.

Pregalvanized Zinc (PG)
ASTM A653
Pregalvanized steel is zinc coated by a hot dip process. Steel strip from a coil is fed through a continuous zinc coater which cleans, fluxes and coats the steel with molten zinc. After cooling, the steel is recoiled.

The pregalvanized zinc coating conforms to a 4-90 thickness designation per ASTM A653. The zinc thickness is .75 MIL or .45 oz./sq. ft. of surface area.

This coating is offered on Unistrut channel and tubing and is a well-proven, time-tested performer for indoor and outdoor applications. For severe corrosion applications, hot dip galvanizing, as described below, is a good alternative.

HOT DIP GALVANIZED (HG)
ASTM A123 OR A153
In hot dip galvanizing, the finished part is immersed in a bath of molten zinc. This method results in complete zinc coverage and a thicker coating than pregalvanized or plated zinc.

The zinc coating is typically 2.6 MIL or 1.5 oz./sq. ft. of surface area.

This is the coating of choice for applications where severe corrosion is a design factor.

SPECIAL COATING
When specific applications require other than standard available finishes, special finishes can be supplied per customer requirements.

Electroplated Zinc (EG)
ASTM B633, Type III SC1 or SC3
In the electroplating process, the part to be zinc coated is immersed in a solution of zinc ions. An electric current causes the zinc to be deposited on the part.

SC1 (Mild) has a Zinc coating of 0.2 and is recommended for dry indoor use. SC1 is the standard finish thickness.
SC3 (Severe) has a Zinc coating of 0.5 mill and is the standard finish thickness only on UL Listed raceway products.

Perma-Gold (ZD)
ASTM B633, Type II SC3
Similar to the EG process except in a yellow color.

SC3 (Severe) has a Zinc coating of 0.5 mill and is the standard finish thickness only on UL Listed raceway products.

Zinc Coating
Unistrut products are available in four types of zinc coatings:
- Electroplated (EG)
- Perma-Gold (ZD)
- Pregalvanized (PG)
- Hot Dip Galvanized (HG).

Zinc offer two types of protection:
- **Barrier**: The zinc coating protects the steel substrate from direct contact with the environment.
- **Sacrificial**: The zinc coating will protect scratches, cut edges, etc. through an anodic sacrificial process.

The service life of zinc coating is directly related to the zinc coating thickness as shown below.

<table>
<thead>
<tr>
<th>Comparison of Zinc Finishes</th>
<th>Zinc Thickness</th>
</tr>
</thead>
<tbody>
<tr>
<td>Finish</td>
<td>Thickness</td>
</tr>
<tr>
<td>Hot Dip Galvanized</td>
<td>2.6 MIL</td>
</tr>
<tr>
<td>Pre-galvanized</td>
<td>0.75 MIL</td>
</tr>
<tr>
<td>Electro-Galvanized (SC1)</td>
<td>0.2 MIL</td>
</tr>
<tr>
<td>Electro-Galvanized (SC3)</td>
<td>0.5 MIL</td>
</tr>
<tr>
<td>Perma-Gold (SC3)</td>
<td>0.5 MIL</td>
</tr>
</tbody>
</table>

As shown in the graph, when the zinc coating is double, the service life is double under most conditions.
